Plus Minus

Given an array of integers, calculate the fractions of its elements that are *positive*, *negative*, and are *zeros*. Print the decimal value of each fraction on a new line.

Note: This challenge introduces precision problems. The test cases are scaled to six decimal places, though answers with absolute error of up to 10^{-4} are acceptable.

For example, given the array arr=[1,1,0,-1,-1] there are 5 elements, two positive, two negative and one zero. Their ratios would be $\frac{2}{5}=0.400000$, $\frac{2}{5}=0.400000$ and $\frac{1}{5}=0.200000$. It should be printed as

```
0.400000
0.400000
0.200000
```

Function Description

Complete the *plusMinus* function in the editor below. It should print out the ratio of positive, negative and zero items in the array, each on a separate line rounded to six decimals.

plusMinus has the following parameter(s):

• arr: an array of integers

Input Format

The first line contains an integer, n, denoting the size of the array. The second line contains n space-separated integers describing an array of numbers $arr(arr[0], arr[1], arr[2], \ldots, arr[n-1])$.

Constraints

$$0 < n \le 100 \ -100 \le arr[i] \le 100$$

Output Format

You must print the following 3 lines:

- 1. A decimal representing of the fraction of *positive* numbers in the array compared to its size.
- 2. A decimal representing of the fraction of *negative* numbers in the array compared to its size.
- 3. A decimal representing of the fraction of zeros in the array compared to its size.

Sample Input

```
6
-4 3 -9 0 4 1
```

Sample Output

```
0.500000
0.333333
0.166667
```

Explanation

There are $\bf 3$ positive numbers, $\bf 2$ negative numbers, and $\bf 1$ zero in the array.

The proportions of occurrence are positive: $\frac{3}{6}=0.500000$, negative: $\frac{2}{6}=0.333333$ and zeros: $\frac{1}{6}=0.166667$.
